## DATASHEET

### eCopy® Connector for EMC® Documentum® Content Server

#### Directly access Documentum from ShareScan-enabled scanning devices

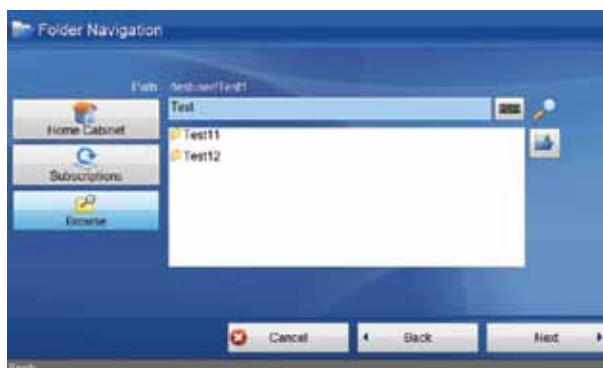

Using the eCopy Connector for EMC Documentum, paper documents can be scanned at a digital copier or document scanner and sent into an EMC Documentum Repository for storage and ongoing document lifecycle management.

With the eCopy Connector for EMC Documentum, hard copy documents are quickly converted into digital files to be stored in folders within an EMC Documentum Repository. Document indexing information (such as type and format) and any Type specific attributes are input at the digital copier or scanner using eCopy ShareScan®. This enables the document to be sent directly to the specified location within EMC Documentum for storage, where it is immediately available for retrieval by authorized EMC Documentum users.

The eCopy Connector for EMC Documentum enables eCopy ShareScan® users to scan paper documents into the EMC Documentum Content Management Platform to manage, store, secure, and deliver unstructured content in a systematic manner, according to predefined business rules, policies, and procedures.

## FEATURES AND BENEFITS

- Leverage existing document management system investment
- Validate users at the device
  - Create an electronic audit trail
  - Conform to corporate security policies: *Sarbanes Oxley, HIPAA*
- Integrate dynamically with EMC Documentum
  - Reflect unique user permissions and preferences
  - Consistent user interface and workflow reduces training time
- Lower total cost of ownership
  - Server modifications automatically reflected at each device in real time
- Capture missing information
  - Add paper documents to your EMC Documentum Document Management Processes
- Profile documents completely from an eCopy-enabled device with minimal typing
- Improve workgroup collaboration
  - Easily retrieve electronic and paper documents from EMC Documentum

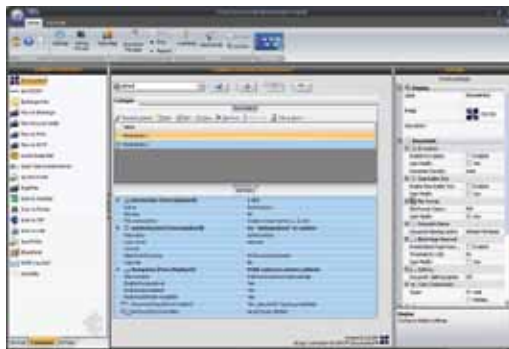

Users are given an intuitive view to the Repository that coincides with what they see at their desktop. They get recent folders, personal subscriptions, and the cabinets and folders to which they have access. Each of these views can also be configured to streamline the scanning process.

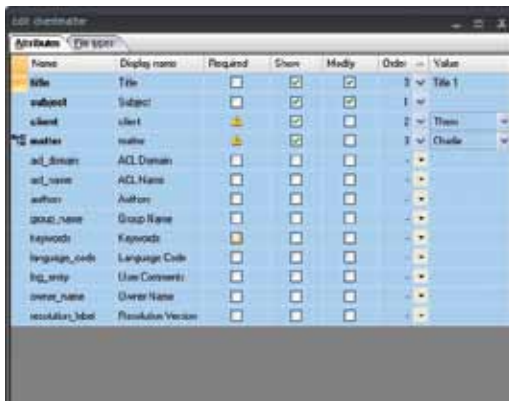

Add required document indexing information at the copier just as you would back at your desktop, ensuring quick user adoption.

Initial installation and setup take only minutes to complete. Simply identify the EMC Documentum Repository, input user name and password, then test the connection. The connector is an out of the box application that requires no custom coding, supports most customizations made to EMC Documentum, and is able to support Docbroker failover.

After selecting the location, populate the index fields or use the deFor each Type, the behavior of the attributes can be defined by the administrator, including setting default values, required or optional, modifiable or read only and hidden. This gives the administrator the ability to tailor the scanning process to the types of documents stored from any given device.

## DEVICE COMPATIBILITY

For the latest supported e-mail servers, document management systems, network fax servers, and cost recovery systems, please visit:
